What makes a great teacher depends on whom you ask. But most would probably agree on a combination of superb people skills, a passion for the profession and a remarkable toolkit of teaching techniques.

For all this and more, Thomas Love, an expert in statistics and professor of medicine, population and quantitative health sciences at the School of Medicine, has been recognized with a 2018 John S. Diekhoff Award for Graduate Teaching.

Love will be recognized along with other award winners during commencement ceremonies May 20.

Keep up-to-date on commencement via social media using #CWRU18.

The students who nominated Love are effusive in their praise for his enthusiasm, the extra steps he takes to ensure successful learning and his deep-rooted commitment to addressing their goals and interests while still providing thorough coverage of requisite material in his classes.

"The amount students learn in his classes is incredible," wrote one student nominator. "His efforts to engage students with a blend of theory and actual problems they will encounter in the professional realm really prepares them for the next step in their careers."
